Typical Applications
Corrosion, Insulation, Sealing, and Waterproof Protection for:
- Pipes, flanges, joints and valves for underwater, above and below ground
- Underwater pipelines and platform rig superstructures
- Concrete, steel and wooden pilings, in the splash zone, above and below water line
- Jetty, bridge and pier pilings, as well as, superstructure supports
- Oil, water and chemical pipelines for underwater, above and below ground
- Municipalities’ water and wastewater treatment piping systems
- Industrial and institutional plant piping and duct systems

Benefits
- Resistant to temperature extremes
- Easy to apply, no mixing or messy clean up
- Resistant to water, acids, salts or soil organics
- Can be applied to wet surfaces and underwater
- Minimal surface preparation required
- Quick, long term protective coating, ready for immediate service
- Contains no solvents

Description
The Syntho-Shield™ system is comprised of two components, Syntho-Glass® for mechanical and corrosion abilities as well as a Petrolatum Tape undercoating for long term corrosion protection. The Petrolatum Tape under coating is a non-woven synthetic fabric tape, impregnated with petrodatum and inert siliceous fillers. This unique protective coating system has been designed as an effective solution to corrosion, sealing, insulation, and waterproofing problems. Syntho-Glass, a fiberglass cloth impregnated with a water activated resin, is used as a protective outer wrap. Syntho-Shield is an innovative system that offers exceptional mechanical and impact strength for under water, under ground and above ground corrosion protection coating applications.
